www.samueldelesque.me

I have worked on engineering teams from 1 to 100s. After founding my first startup in college, I moved on to working tor Volt in Copenhagen. I then moved to NYC and worked in an ad agency for well known brands. I then switched to work on a product full time at Dailymotion and later Carbon Black. I have now been building tech for over 10 years.

I have co-founded Lokely, an app for recommendations built in React-Native with Node, Elastic search and Mongo in the backend.

I am well versed in agile development - and interested in a broad stack of technologies. I believe no challenge is too big and nothing can't be done with the right mindset.

Interested in small teams with big challenges.

Expertise

Languages
Javascript, PHP, Python

Databases
MySQL, Mongo, Redis, Postgres

Markup
HTML5, Less, Sass, Css 3, Twig

Frontend
React, React-Native, jQuery, Angular, Ember, Backbone

Backend
Node, Koa, Express, Eve, Docker, Linux

Data
SciPy, Numpy, Pandas, Spacy, NLTK, Jupyter notebook, machine learning model evaluation

Environment
Bash, Webpack, Gulp, Git, Browserify...

Devops
AWS (SQS, ELB, EC2...), Digital Ocean, PM2, CI/DD, Travis, Ubuntu

Open source
http://salad-ui.com/ (UI toolkit)

Experience

Carbon Black
02/2017 - present

Role: Senior UI engineer
Technologies: React, Node, Scss, PHP, Python, Machine Learning, Mongo, Redis, Docker

Dailymotion
06/2015 - 02/2017

Role: Senior fullstack engineer.
Technologies: React, Node, Scss, PHP, Python, Machine Learning, Mongo, Redis, Docker

Lokely
10/2015-present

Role: Founder
Product: Recommendations app
Technologies: React-Native, Redux, Node, Mongo.

Domani Studios
01/2014 - 06/2015

Role: Interaction developer
Clients: Nintendo, Starwood, GreyGoose, Harman Kardon, House of Marley, Ahmad Tea.

Volt
